Fastlife activity onboarding framework

Nov 3, 2026 · @Michael

Every activity, attraction, venue, event or tour Fastlife considers goes through the same eight stages before a traveller can book it. The test is simple: should we recommend it, can the traveller safely and practically do it, and what has to be true for us to run it reliably. Nothing goes live from discovery alone.

At a glance

Activity onboarding flow · 8 stages

Stages 1–5 build the evidence and the support plan, 6–7 turn it into a decision, and 8 keeps it current: bad operational evidence sends a live activity back to review.

Stages 1–3 — Discover, profile and verify

A candidate becomes a profile only when a team member has recorded the basics, and a verified profile only when someone from Fastlife has been there in person.

1. **Discover:** anyone on the team, a partner or a traveller can suggest an activity. Log it as a Candidate with the source.
2. **Profile:** record every field in the table below. Anything not yet confirmed is marked "not confirmed", never guessed.
3. **Verify:** someone from Fastlife does the activity in person, checks the profile against reality and takes real photos. The status moves to Under Review.

Activity profile

Field	What we record
Identity	Name, category, short description
Location	Address, GPS pin, neighbourhood, city
Operator	Owner or manager, phone, WhatsApp, email
Hours	Opening hours or fixed sessions, days closed
Type	Activity type; fixed-time or flexible
Duration	Typical time on site, measured on the visit
Booking	Reservation, ticket or deposit needed, and how far ahead
People	Whether a guide or driver is needed
Media	Real photos and video, with permission to use them

Checklist

- [ ] Candidate logged with its source
- [ ] Every profile field filled or marked "not confirmed"
- [ ] In-person visit done, notes and photos saved
- [ ] Status moved to Under Review

Stage 4 — Assess

Each activity is assessed on eight dimensions, using what we saw on the visit. Security and safety are always two separate assessments: security is about people around the activity, safety is about the activity itself.

Dimension	What we assess
Experience	Fun, uniqueness, Nigerian and local authenticity, tourist relevance, value for time and money, best audience (solo, couple, family, group, diaspora)

Dimension	What we assess
Security	Area crime, harassment and scams, night-time risk, venue security, parking and pickup security, how exposed a tourist is
Safety	Equipment and facilities, hygiene, fire and emergency procedures, operator competence, weather and environment, hazards specific to the activity
Proximity and logistics	GPS zone, travel time (not just distance), traffic sensitivity, road quality, drop-off and pickup, parking, nearby activities, fit in an itinerary
Accessibility	Wheelchair and mobility access, suitability for elderly guests and children, toilets and seating, walking and terrain, payment options, language, whether tourists can find their way alone
Reliability	Accuracy of opening hours, reservation reliability, response time, unexpected closures, queues, capacity, operator track record
Commercial and booking	Price and how sure we are of it; free, pay on arrival or prepaid; deposits; commission; cancellation, refund and no-show rules; who collects payment
Context	Best time and day, weather and season, traffic and crowd sensitivity, night suitability, conditions when it should be avoided

Checklist

- [ ] All eight dimensions assessed and notes saved
- [ ] Security and safety recorded separately
- [ ] Price confirmed with the operator, with the date checked
- [ ] Conditions to avoid (time, weather, season) written down

Stage 5 — Operationalize: emergency and recovery

Before approval, we must be able to answer one question: if something goes wrong here, can we support or remove the traveller quickly? If the answer is no, the activity cannot go live without restrictions.

What we record	Why it matters
Emergency contact at the venue	Someone on site picks up when we call
Venue security	Who can step in before help arrives
Nearest suitable medical support	Where we take a traveller who is hurt or unwell
Emergency pickup point	A fixed spot the driver can reach fast
Driver access	Whether a car can get close, at what hours
Mobile network coverage	Whether the traveller can reach us from inside
Fastlife escalation path	Who the guide or driver calls first, and what happens next

Escalation protocol

1. The guide, driver or traveller calls the Fastlife duty phone first, then emergency services if needed.
2. The duty lead messages the traveller within 10 minutes with what is happening and what comes next.
3. The incident is logged against the activity and feeds Stage 8 monitoring.

Checklist

- [ ] Emergency contact tested by phone
- [ ] Medical support and pickup point recorded with GPS
- [ ] Network coverage checked on the visit
- [ ] Escalation path briefed to guides and drivers

Stages 6–7 — Score, classify and approve

Every activity gets eight separate scores, a risk level and a status. Safety and security can never be averaged away: a great experience with unacceptable safety or security fails or is restricted, whatever its overall score.

Scores kept separately

Experience · Security · Safety · Accessibility · Reliability · Logistics · Value · Tourist friendliness. These can roll up into an overall **Guide Confidence Score**, but the hard gate is checked first.

Risk levels

Level	Meaning	How we offer it	Example
GREEN — Standard	Low risk	Recommended normally	Daytime museum visit
YELLOW — Managed	Acceptable with precautions	Shown with clear recommendations	Guide recommended after a certain time
ORANGE — Restricted	Acceptable only under conditions	Bookable only with the conditions attached	Fastlife driver and guide mandatory
RED — Do not offer	Unacceptable risk	Never bookable or recommended	—

Approval record

Every assessment produces this record, stored with the activity:

```
{
  "status": "LIVE | RESTRICTED | REJECTED",
  "riskLevel": "GREEN | YELLOW | ORANGE | RED",
  "guideConfidence": 0,
  "experienceScore": 0,
  "securityScore": 0,
  "safetyScore": 0,
  "accessibilityScore": 0,
  "reliabilityScore": 0,
  "conditions": {
    "guideRequired": false,
    "driverRequired": false,
```

```
    "nightAllowed": true,
    "weatherDependent": false
  },
  "planning": {
    "durationMinutes": 0,
    "bestTime": "",
    "zone": "",
    "fixedTime": false
  },
  "reasons": [],
  "verificationRequired": []
}
```

Checklist

- [ ] All eight scores entered
- [ ] Hard gate checked: safety and security acceptable on their own
- [ ] Risk level set, with conditions for YELLOW and ORANGE
- [ ] Reasons and outstanding verification written in the record

Stage 8 — Lifecycle and monitoring

Onboarding does not end at LIVE. An activity moves Candidate → Under Review → Verified → Live, and a live activity can later become Restricted, Temporarily Unavailable, Suspended or Retired.

Status	When it applies
Live	Approved and bookable under its risk level
Restricted	Still offered, only with added conditions
Temporarily Unavailable	Closed for a known period (works, season, event)
Suspended	Under re-review after a complaint or incident
Retired	No longer offered

Where the evidence comes from: travellers, guides, drivers, partners, support tickets, incident reports, and routine price and hours checks.

What we track per activity

- Last verification and next review date
- Last price check and last opening-hours check
- Incident count and recent complaints
- Every change of risk level, with the reason

Trigger rule: repeated negative operational evidence sends an activity back to review, or restricts it automatically until reviewed.

Checklist

- [ ] Next review date set at approval
- [ ] Price and hours checks on the calendar
- [ ] Incidents and complaints linked to the activity
- [ ] Re-review triggered when the threshold is hit

Final decision test

Before any activity is approved, the reviewer answers five questions. If any critical answer is No, the activity is not approved without restrictions.

1. **Should** we recommend it?
2. **Can** the traveller reasonably experience it?
3. **Can** we get them there and back?
4. **Can** we responsibly send them there?
5. **Can** Fastlife reliably fulfil and support the experience?

Open decisions

- [ ] The scoring scale (1–5 or 0–100) and how the Guide Confidence Score is weighted
- [ ] The minimum safety and security scores that pass the hard gate
- [ ] Who signs off each risk level (one reviewer for GREEN, two for ORANGE?)
- [ ] How often live activities are re-verified, by risk level
- [ ] The complaint or incident count that triggers automatic restriction
- [ ] Who staffs the duty phone, the hours it covers, and the response time we commit to
